

Improving Nutrition Governance

A Food & Nutrition Action Plan for Surabaya City Government

National Challenges

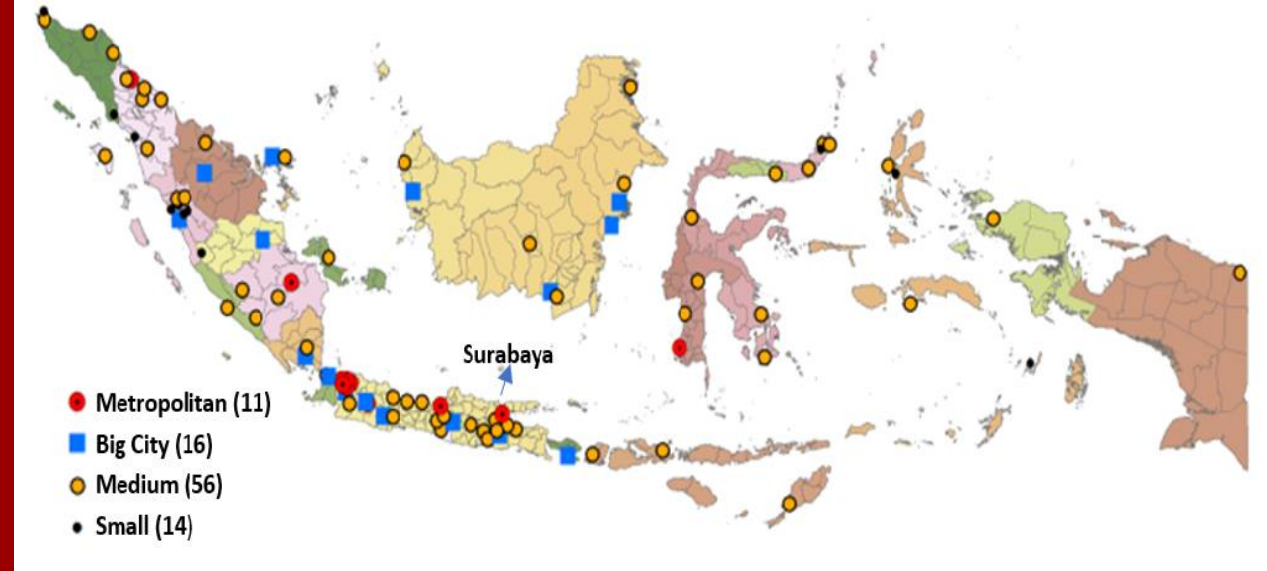

Probability-weighted impact of policies on undernourishment, based on food insecurity risks

- Domestic agricultural production and food & nutrition security are economically and politically important in Indonesia.
- A significant focus of Indonesia's food & nutrition security program (amounting to around USD 2 billion per year) is on rice.
- Reducing undernourishment remain a policy priority, but Indonesia's current food & nutrition security strategies are not the best way to achieve this goal.

Urban Challenges

- Indonesia's current food & nutrition security strategy doesn't meet urban need
- 56% of 260 million Indonesians were living in urban area in 2015, and this figure will rise to 67% in 2035
- The prevalence of obesity of Indonesian urban areas is 20% - 53% higher than in rural areas
- Food and nutrition system is not in priority of urban development policy in Indonesia

Indonesia's Five Priority

1. Urban Transport Systems.

2. Water Supply and Sanitation.

3. Drainage, Urban Flood and Disaster Risk Management.

4. Land, Housing and Settlements.

5. Solid Waste Management.

Project:

- Baduta →
- The pretty

- Working with the Surabaya city government to improve the urban governance for nutritious and safe food (NSF) systems, through:
 - develop the city action plan to improve access and demand to Nutritious and Safe Food;
 - identify possible interventions that can be led and funded by the city government and identify potential actors that can collaborate on the implementation, specifically private sector;
 - work with media to develop mechanisms to create transparency and accountability on the plan and its implementation
 - provide TA to implement key interventions.

Thank you.
